Naama Skital

AI / Machine Learning Engineer

Petah Tikva, Israel

+972-54-660-7344 | naamaskital1@gmail.com | LinkedIn | GitHub

PROFILE

Computer Science honors graduate specializing in AI and Data Science, with end-to-end machine-learning projects in computer vision and NLP and professional Python/Linux engineering experience. Combines model evaluation, experimentation and data processing with practical software development and systems debugging.

EDUCATION

B.Sc. Computer Science — Ariel University Nov 2023 – Aug 2026
Honors Program | AI & Data Science Track | GPA: 92.17/100
Rector's Honor List (first year). Selected grades: Deep Learning & NLP 100, Operating Systems 99, Honors Data Structures 99, Computer Networks 98.
Relevant studies: Algorithms, OOP, Operating Systems, Computer Networks, Machine Learning, Computer Vision, Computer Architecture / Systems Programming.

PROFESSIONAL WORK

Software / Algorithm Developer — LMY Mar 2025 – 2026

- Developed Python software on Linux for a UAV data-acquisition platform supporting 3D mapping with LiDAR and navigation sensors.
- Implemented and debugged ROS2/DDS messaging and sensor synchronization on Raspberry Pi, investigating timing, communication and data-consistency issues.
- Built validation and diagnostic scripts; supported post-flight data processing and reliable system operation.

SELECTED PROJECTS

Visual Advertisement Moderation Computer Vision, PyTorch, CLIP, OCR
Developed four-class image moderation pipeline combining CLIP embeddings with OCR text; compared model variants and evaluated class imbalance and calibration. Best fusion: **91.0% accuracy, 0.655 macro-F1**. [GitHub]

Context-Aware Sarcasm Detection NLP, MiniLM, Scikit-learn
Compared TF-IDF/logistic regression and transformer-embedding baselines to study the impact of conversational context; performed controlled evaluation and error analysis. [GitHub]

C++ Software Engineering Portfolio OOP, Templates, STL
Built C++ assignments involving inheritance, polymorphism, generic programming, custom iterators, resource management, STL containers and algorithms.

Reversi Game Java, OOP, Algorithms
Implemented an 8×8 Reversi game with legal-move validation, undo, GUI integration, state management and rule-based AI opponents.

TECHNICAL SKILLS

Programming: Python, SQL, C++, Java
ML / Data: PyTorch, Scikit-learn, pandas, NumPy, CLIP, NLP, Computer Vision, OCR, Model Evaluation
Engineering: Linux, Git, OOP, Algorithms, ROS2, DDS, Debugging

LEADERSHIP & COMMUNITY

National Service (2 years): Mentored at-risk youth and taught mathematics in educational settings. **Mathematics Instructor:** Prepared students for 4-unit matriculation exams. **Volunteering:** Special-needs youth mentoring and Schneider Children's Medical Center.

Languages: Hebrew (native), English (professional working proficiency).
